

Hand Toggle Instructions

Installation

The hand toggles you have purchased are very easy to install. There is sufficient cord included so that the toggles can easily be removed if you choose. We do this when traveling with boats so the toggle doesn't bang against the boat. Insert each end of the chord through the hole in the base of the toggle. Feed the line through one end of the toggle and tie the two ends together with an overhand knot. Take the loop of cord and thread it through the hole in the end of your boat. Feed the toggle through the loop and pull it tight.
